

App Name : ZYX
Apple ID : 505193110
Bundle Identifier : org.JODI.zyx
Localizations : ("en")
Prerendered Icon Flag :
Original Zip File Name : .ipa
Bundle Short Version String : 1.2
Bundle Version : 1.2
Minimum OS Requirements : 5.0
Build SDK : 9B176
Build Platform : 9B176
Required Capabilities : armv7
Supported Architectures : armv7
Device Family : iPhone / iPod Touch
Newsstand App : false
Entitlements : ZYX.app/ZYX
get-task-allow: false
keychain-access-groups: (FQK7H3AF9T.org.JODI.zyx)
application-identifier: FQK7H3AF9T.org.JODI.zyx

ZYX

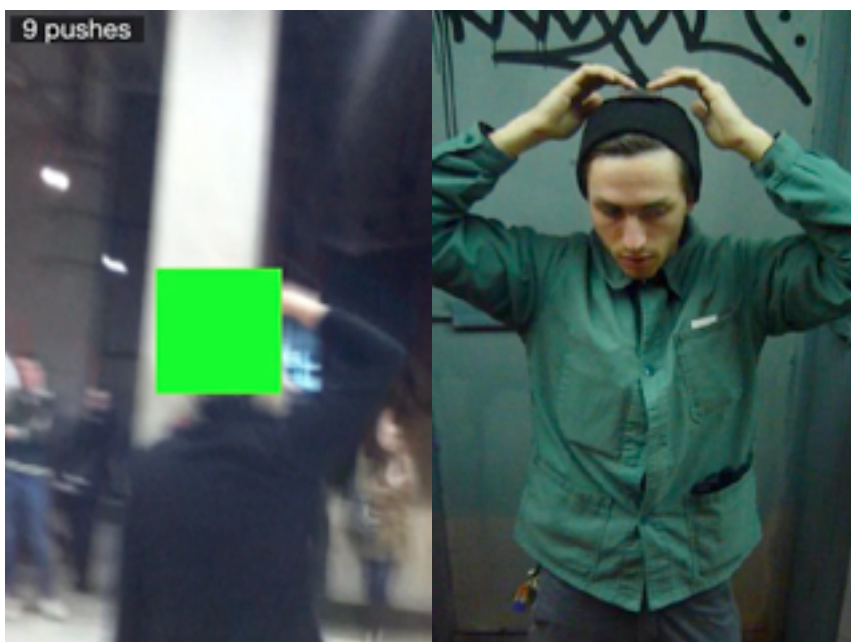

The application encourages user movements / act and turn them into a / personal / own performance.
captures / records user interactions. 12 levels.

“**ZYX** uses the iPhone or iPod Touch’s built-in motion-tracking capabilities to guide users through a series of gestures, from turning in a circle to raising one’s arm up and down. Each time a gesture is performed correctly, the phone clicks; when all gestures have been completed, the device sounds an alarm in celebration. This app situates the user in a realm that is both virtual and physical. Bystanders see the user as performing a strange dance; in contrast, the iPhone observes and rewards the user’s adherence to a prescribed set of movements. This dissonance between the virtual space inhabited by the iPhone user and the physical space occupied by the observer has become an everyday phenomenon, exemplified by the experience of passing someone on the street who appears to be delivering a nonsensical monologue while speaking into the microphone of a wireless mobile device.”
